

BED BUG KILLER

Bed Bug Killer lasts for years to kill unhatched bed bugs and gives protection against future infestations.

Bed Bug Killer does not use poisons to kill the bed bugs, it uses a natural powder that scratches the shell of the bed bugs causing them to die from dehydration.

Because bed bugs have no resistance to Bed Bug Killer you can rest assured that you will have years of protection with one application.

Bed Bug Killer can also be used in Bed Bug Barriers and mattress protectors to kill bed bugs that are either trying to get into the bed or trying to live on the bed.

Bed Bug Killer can be used underneath carpets for lasting protection, as well as in power points and wall sockets where current chemical and steam applications are not permitted.

Pack size: 200gram puffer pack
